Lab 2: Burndown Charts

Student Name: Nagashri R Patil

SRN: PES1UG24CS289

Problem Statement: #43 – Feature Flag & Dynamic Config Manager

Course: Software Engineering Laboratory (Lab 2)

Sprint Burndown Charts & Progress Tracking

A burndown chart shows the amount of work completed in a sprint and the total work remaining. It tracks team progress against planned velocity, monitors burn rate, and detects scope creep or bottlenecks early.

Figure 1: Sprint 1 Burndown Chart (Core Engine & Targeting — 24 Story Points)

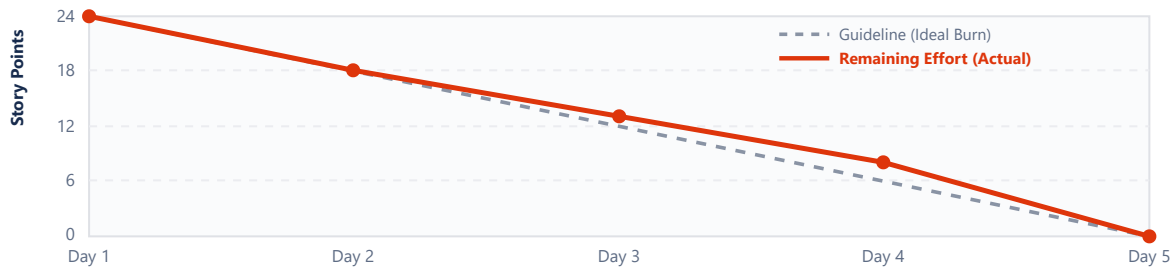

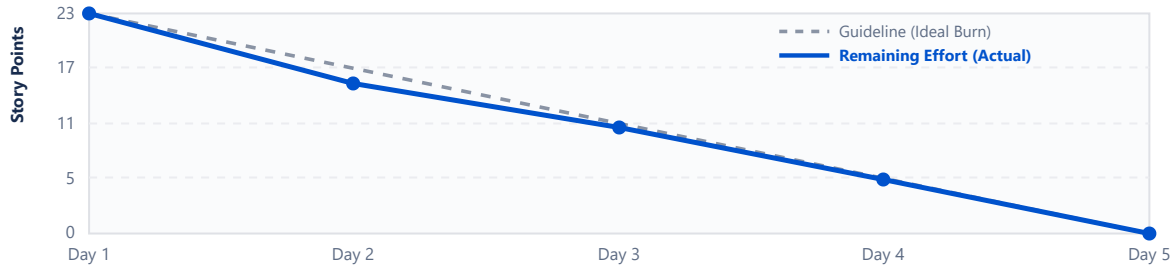

Figure 2: Sprint 2 Burndown Chart (Governance & Real-Time Sync — 23 Story Points)

How to Read Jira's Burndown Chart

- **Estimation Statistic:** Story points (vertical axis) represents the aggregate difficulty remaining.
- **Guideline:** The dashed line represents ideal linear daily progress from sprint commitment to zero.
- **Remaining Values:** The solid line tracks actual unfinished work. Being below the guideline indicates ahead of schedule; hovering above signals complex work undergoing testing before burn-down.
- **Zero Scope Creep:** A strictly downward trajectory with no upward spikes confirms protected sprint boundaries without unestimated work injections.
